In this sprint, we are focusing on our main view, displaying a map, and a return home button
1. Greet user : Shewli
2. Show table of hikes: Devin
3. map to entrance of trail : Phani
4. show map of current location : Myles
5. have tabs to go to different pages : Sai Prakash

Structure:
Feature:
  As a
  I want to
  So that

Cucumber Tests:

1. #feature/hello_user.feature
              Feature: Intro Banner
              As a product manager,
              I want every user to be greeted when they visit the site
              so that they are aware of what page they are on.

● Happy Scenario: Greeting in Main View
              When I open the webpage
              Then I should see a greeting bar
              And be indicated which page I am on

● Sad Scenario: Error Message
              When I open the webpage
              An error message "Wrong page, Turn back " is displayed
              And I am directed back

Notes:
*this will help distinguish if it is a general/guest view, administrator view, previous user
*Each different "view" will have a slightly different greeting

2. #feature/hike_list.feature

Feature: What hikes are there?
As a hiker
I want to see what trail options there are
So that I can decide which one I want to learn more about

- Happy Scenario: User sees the hikes on a table
  When I go to the home page
  Then I should see the trail options
  And show the name and location of the trail

- Sad Scenario: User doesnt see list of trails
  When i open the homepage
  Then I don't see a trail option
  And get an error message

3. #feature/trail_entrence.feature

Feature: Trail Head
As a Product Manager,
I want all users to have a better understanding about the place they are visiting
so that no one gets lost

- Happy Scenario: User Can See Trail
  When I click on a trail
  I should see the location of trailhead
  And where it is on the map

- Sad Scenario: User cannot see Trail
  When i click on a trail
  No location is found
  And an error message is displayed

Notes:
*Users should see the clear route especially through a forest or mountains region When Users open the webpage
*Users should see a map about the visiting place

4. #feature/current_location.feature

Feature: Current Location
As a biker
I want to know exactly where I am on the map
so that I can plan my adventure accordingly

- Happy Scenario: Displaying current location
    When I open up the page
    I should see the map
    And my current location

- Sad Scenario : No map display
    When I open my page
    I dont see a map
    And I cannot locate my current location

5. #feature/home.feature

Feature:
As a user,
I want to click on a button with a mouse on it
So that I can be redirected to home

- Happy Scenario: Users seeing home page
    When I click on the home tab
    Then I should see a page saying "Welcome Explorer!"
    and below there should be a map displaying the current location or selected address.

- Sad Scenario: If user don't see the "welcome explorer!" or if the map is not displayed
    When user clicks on the tab
    Then an error message must display "failed to load, please reload the page"
    And reload the page

#feature/trails.feature

Feature:
As a user,
I want to click on a button with a mouse on it
So that I can be redirected to hiking trails
- Happy Scenario: Users seeing trails page
        When I click on the trails tab
        Then I should see a page displaying hiking trails on the map
- Sad Scenario: If user don't see the trails on the map

When user clicks on the tab
Then an error message must display "failed to load trails, please reload the page"
And reload the page

#feature/about.feature

Feature:
As a user,
I want to click on a button with a mouse on it
So that I can be redirected to more information on trails

- Happy Scenario: Users seeing about page
  When I click on the about tab
  Then I should see a page displaying more information about the selected trails
- Sad Scenario: If user don't see more information about trails
  When user clicks on the tab
  Then an error message must display "failed to show more information, please reload the page"
  And reload the page

#feature/account.feature

Feature:
As a user,
I want to click on a button with a mouse on it
So that I can be redirected to user profile information

- Happy Scenario: Users seeing account page
  When I click on the account tab
  Then I should see a page displaying user's information like name, contact details, previously completed trails, etc.
- Sad Scenario: If user don't see personal information
  When user clicks on the tab
  Then an error message must display "failed to show your profile, please reload the page"
  And reload the page

Changes were made in this sprint because our original stories were too broad. We are compounding off of the comments made from our demo and taking sizeable steps to see progress towards our customers requests. Since we are new to cucumber tests, we chose these features because the happy path shows if our code was functional and the sad paths consisted of error messages.
